Burns are tissue damage that results from heat, overexposure to the sun or other radiation, or chemical or electrical contact. Burns can be minor medical problems or life-threatening emergencies. The treatment of burns depends on the location and severity of the damage. Sunburns and small scalds can usually be treated at home.

Burns - Symptoms and causes - Mayo Clinic

Given the nature and context of burned human remains, special care is needed in recovery,. Two major factors complicate recovery of burned human remains: fragmentation and context. Soft tissue changes with burning include post-mortem muscle contracture. Dehydration and protein denaturation lead to muscle shortening.
